

## Project Planning Phase

|              |  |
|--------------|--|
| Team ID      | PNT2022TMID29156   |
| Project Name | Project-Signs with Smart Connectivity For Better Road Safety |

### Product Backlog, Sprint Schedule and Estimation

Use the below template to create product backlog and sprint schedule

| Sprint   | Functional Requirement (Epic)   | User Story/Task   | Story Points | Priority | Team Members                               |
|----------|---|---|--------------|----------|--|
| Sprint-1 | Intializing the Resources   | Create an account in Open Weather API   | 1            | LOW      | Gokul<br>Karvannan<br>Kannan<br>Sureshbabu |
| Sprint-1 | Code in Software is written   | Write a python script using the inputs given from OpenWeather API                     | 2            | MEDIUM   | Gokul<br>Karvannan<br>Kannan<br>Sureshbabu |
| Sprint-2 | Sending the software to cloud   | The python code from sprint 1 should be sent to cloud so that it is easily accessible | 1            | MEDIUM   | Gokul<br>Karvannan<br>Kannan<br>Sureshbabu |
| Sprint-3 | Initialising the connection between hardware and cloud                    | The hardware should be intergrated for the easy access of the cloud functions         | 2            | HIGH     | Gokul<br>Karvannan<br>Kannan<br>Sureshbabu |
| Sprint-4 | User input-output optimisation and error identification and rectification | Rectify all the shortcomings/errors and initiate the optimisation for better          | 3            | HIGH     | Gokul<br>Karvannan<br>Kannan<br>Sureshbabu |

### Project Tracker, Velocity & Burndown Chart:( 4 Marks)

| Sprint   | Total Story | Duration | Story Points |
|----------|-------------|----------|--------------|
| Sprint-1 | 20          | 6days    | 20           |
| Sprint-2 | 20          | 6days    | 20           |
| Sprint-3 | 20          | 6days    | 20           |
| Sprint-4 | 20          | 6days    | 20           |

#### Velocity :

The average velocity (AV) per iteration unit (story points per day) can be defined as sprint duration by velocity (points per sprint)

$$AV = \text{Sprint duration} / \text{Velocity}$$

**Given:**

Sprint duration= 6days

Velocity= 20

$$\begin{aligned} AV &= 6/20 \\ &= 0.3 \end{aligned}$$

$AV = 0.3$

Burndown chart:
