

## Project Development Phase Sprint IV

Date	16 November 2022
Team ID	PNT2022TMID29156
Project Name	Signs with smart connectivity for Better road safety

**Code for print the random temperature, Road signs, Speed limit, Message :**

**( RandomValues.py )**

```
import wiotp.sdk.device
import time
import random
import ibmiotf.application
import ibmiotf.device
import requests, json

#PUBLISHING TO IOT WATSON
print("Published data Successfully: ", myData)
print("-----")
-----")
client.commandCallback = myCommandCallback
time.sleep(5)
client.disconnect()

```

## Python Simulation :

```

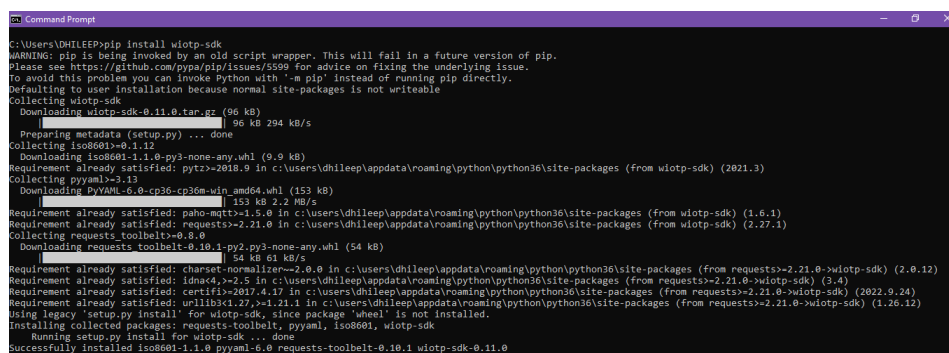

import wiotp.sdk.device
import time
import random
import ibmiotf.application
import ibmiotf.device
import requests, json

myConfig = {
    #Configuration
    "identity": {
        "orgId": "n6r19n",
        "typeId": "NodeMCU",
        "deviceId": "621319106312"
    },
    #API Key
    "auth": {
        "token": "9876543210"
    }
}

#Receiving callbacks from IBM IOT platform
def myCommandCallback(cmd):
    print("Message received from IBM IoT Platform: %s" % cmd.data['command'])
    m=cmd.data['command']

```

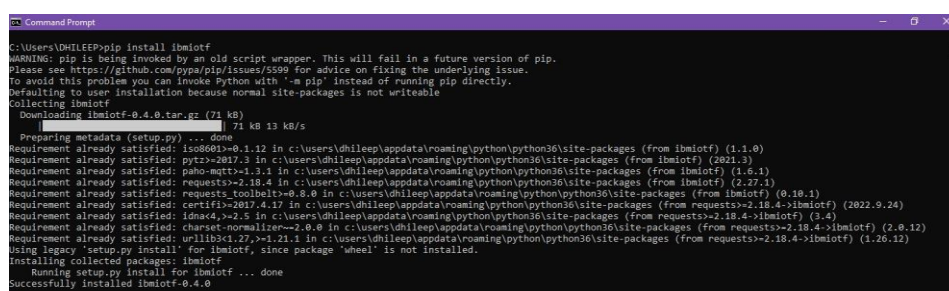

## Import wiotp-sdk & ibmiotf :

```

C:\Users\DHILEEP>pip install wiotp-sdk
WARNING: pip is being invoked by an old script wrapper. This will fail in a future version of pip.
Please see https://github.com/pypa/pip/issues/5599 for advice on fixing the underlying issue.
To avoid this problem you can invoke Python with '-m pip' instead of running pip directly.
Defaulting to user installation because normal site-packages is not writeable

## OpenWeatherMap - (Ex., Salem, IN) :

The screenshot shows the OpenWeatherMap website interface. At the top is a navigation bar with the OpenWeather logo and links for Weather in your city, Guide, API, Dashboard, Marketplace, Pricing, Maps, Our Initiatives, Partners, Blog, For Business, Nithy..., and Support. Below the navigation bar is a section titled "Weather in your city" with a search bar containing "Salem, IN" and a "Search" button. The search results show a weather icon for overcast clouds, the temperature 26.9°C, and details: temperature from 26.9 to 26.9 °C, wind 3 m/s, clouds 94 %, 1009 hpa. The geo coordinates are [11.65, 78.1667]. Below the search results, there is a text box stating "Search engine is very flexible. How it works:" followed by a bullet point explaining that to make it more precise, one should put the city's name, comma, 2-letter country code (ISO3166). The order is important - the first is city name then comma then country. Example - London, GB or New York, US.

## Python IDLE Output :

```
Python 3.6.5 Shell
File Edit Shell Debug Options Window Help

Published data Successfully: {'Temperature': 26.03, 'Message': 'EMERGENCY, HOSPITAL NEARBY', 'Sign': 'Speed Breaker', 'Speed': 'Limit Exceeded', 'Visibility': 'Clear Weather'}
